A case study of Kalyani of PENDEKALLU Village of THUGGALI Revenue Mandal

It was only when Kalyani was aged 1 year, her parents Obulappa & Rangamma of Pendekallu village had recognized that their daughter was affected by cerebral palsy. Their son died of the same problem. Later she got fits that resulted in contractures of muscles & tendons. They approved local registered medical practitioner (RMP) who had given a few tablets & injections. The situation got deteriorated and this compelled parents to approach a specialist doctor at Kurnool

Ms. Kalyani normal position before intervention

“As ours was consanguine marriage we gave birth to two disabled children. Our son who suffered from same problem died as we had shown to medical quacks. We were so disappointed because our daughter was also born with the same problem. This intensified our mental suffering. It was at that time Sacred identified our daughter and explained the causes & the usefulness of physiotherapy. We were not convinced at the beginning. Later the sacred staff had advised us to approach

qualified children specialist who prescribed medicine for my daughter's fits problems. We are continuing physiotherapy exercises. There was some improvement in her mobility. Some syrup for strength was also prescribed that also contributed for her improvement. We are also given standing board. At present

Ms. Kalyani after programme intervention standing board with support of wooden

Frame provided by SACRED

she is able to stand on her own with the support of wall. We are satisfied even with little changes that we could see in our child. We are prepared to listen to any concrete suggestions that would bring improvement in our child. There is a hope to see some other changes and hence, we follow physiotherapy & other medical advices” parents of Kalyani.
